FAST-TRAK TRADING ROOM PLATFORM

OVERVIEW

Stock-Trak now provides one of the core software components that are necessary to make any University Trading Room a success. Stock-Trak's FastTrak University Trading Room Platform is one such core software component providing a cutting edge, configurable, white-label virtual trading platform that has been used by Business Schools for over 20 years. The platform can be accessed and monitored from any location 24/7 and is not physically hampered by being tethered to a server co-located in your trading room that severely limits access.

Each professor campus wide wanting to use it has the ability to set up a host of trading simulations for their classes. Each class can have a different start and stop date, different trading variables and different trading rules. In all there are about 25 trading variables that you can set up each identifiable by class name and professor.

IN BRIEF HERE IS HOW IT WORKS:

Professors accessing the Trading Room Platform would simply have to register once so that they can set up their professor profile which may include their name, department, email address or nay data that you would want to capture. Professors would also pick a username and password to build or access to their own classes. Using that user name and password they can now set up as many classes as they will teach using the platform.

During this "Class Set-Up" process, professors can name each class for ease of reference and then just toggle back and forth between classes. For example one professor may teach a number of classes and wants to set a class for the Trading Room, one for Corporate Finance and one for Options and Futures.

Using the "Set Up My Class Feature" the instructor sets up Trading Room-Fin601 for example, CorpFin201 and finally OptionsFut5431. As he sets up each class he will select from a drop down list all the trading rules such as, start date, end date cash balance, security types, day trading, margin trading, short selling, commissions, security types etc. When registration for each class is completed, a confirmation email is sent containing a link that is to be forwarded to the student for that class. The student then clicks on the link say for Trading Lab-Fin101 and he is automatically taken to that student registration page for that class.

In its current configuration the Trading Room Platform can process real time order executions of all NYSE/AMEX/NASDAQ including US options and US futures. The Trading Room Platform also provides access to US mutual funds and US bonds with end of day pricing. Additionally provided is unencumbered access to the following international exchanges each with 15-20 delayed pricing. Euronext, Amsterdam, Brussels, Lisbon and Paris, London, Ireland, Frankfurt, Switzerland, Mexico, Hong Kong, Australia, Korea, Malaysia, Thailand, Brazil and Toronto.

FAST-TRAK TRADING ROOM PLATFORM

THESE FULLY BRANDED TRADING ROOM PLATFORMS OFFER:

- ❖ Real-time executions of all NYSE/AMEX/NASDAQ equity trades , Options and Futures are filled at real-time bid/ask

- ❖ Streaming portfolio updates and rankings
